SCIENCE-ART DUTY OF CARE OF LIFE PROCLAMATION

PREAMBLE

In his 1959 Rede Lecture at Cambridge University, the molecular biologist, Sir C P Snow, argued that civilization would be destroyed unless its understanding of the second law of thermodynamics was modified. His solution entailed the reuniting of our scientific culture with the culture of the Platonic tradition of Greek philosophy, which he referred to as the Arts. *The Times Literary Supplement* included Sir C P Snow's book, *Two Cultures and the Scientific Revolution*, in its list of the one hundred books that most influenced Western public discourse since the Second World War (*The Times*, London, 30th December, 2008).

Alexander Hamilton, one of the founding fathers of the Constitution of the United States of America, introduced the concept of liberty to the American public in the following terms: "*Liberty is preserved, not by civic virtue, but by the design of government itself, which, in turn, rests on the principles of physics and geometry.*" The only physics principles acceptable at that time belonged to Newton's published papers. The design of government was thereby based upon a totally mechanistic understanding of the second law of thermodynamics as was confirmed during the 20th Century by President Woodrow Wilson.

The University Library of Cambridge contains the unpublished scientific papers of Isaac Newton (pub.1962). Emeritus Professor of Neuropsychology, Richard Gregory, in his paper, *Alchemy of Matter and of Mind*, (*Nature*, Vol. 342, 30 Nov, p.473), proclaimed "...*Newton's conviction that mechanical science had to be completed by a more profound natural philosophy...*". Newton's physics principles for balancing the mechanical world view were the same ones that upheld the atomistic Platonic Science for Ethical Ends, referred to by Sir C P Snow as the Arts.

Duty of care can be defined as a legal or moral obligation of persons to exercise reasonable care to avoid risk of harm or injury to others or to comply with a legal standard of care. The workings of the mirror neuron generate feelings of empathy or compassion as a moral obligation, which express an infinite, fractal logic that describes emotional behaviour within the human species. The life energies of quantum biology entangle with the energies of quantum mechanics in order to evolve consciousness, demonstrating that the mirror neuron evolves compassionate consciousness, contradicting the prevailing general understanding of the second law of thermodynamics.

If global civilization is to survive, current social, political, legal, economic and scientific entropic rationalism must be rectified to form a social cradle so as to ensure a healthy and sustainable future for humankind. Societies comprising the world communities of civilizations and nation states therefore face a moral choice whether or not to free themselves from the endless cycle of chaos and illusory peace imposed by the unbalanced understanding of second-law logic.

SCIENCE-ART DUTY OF CARE OF LIFE PROCLAMATION

It is self evident that quantum biology, in concert with nanotechnology, has shown that the prevailing understanding that the second law of thermodynamics has sentenced humanity to extinction, is scientifically unnatural. Proponents of these disciplines now have a Science-Art duty of care of life, to nurture the transhuman evolution of a doomed entropic humanity into a more profound, compassionate state of infinite awareness. Be it so proclaimed.

Professor Massimo Pregolato*Massimo Pregolato*.....23rd April 2013
Recipient of the 2010 Giorgio Napolitano Medal awarded on behalf of the Republic of Italy for quantum biological research.

Professor Paolo Manzelli*Paolo Manzelli*.....23rd April 2013
Recipient of the 2010 Giorgio Napolitano Medal awarded on behalf of the Republic of Italy for quantum biological research.

Roberto Denti*Roberto Denti*.....23rd April 2013
Architect and Coordinator of QAGI - Quantum Art Group International

Dr Paul Wildman*Paul Wildman*.....23rd April 2013
Former Chair, American Council for the United Nations University Millennium Project. The Millennium Project - Australasian Node.

Dudley Leggett*Dudley Leggett*.....23rd April 2013
Director of the Sustainability Research Institute, Australia

Professor Robert Pope*Robert Pope*.....23rd April 2013
Director of the Science-Art Research Centre of Australia Incorporated

This duty of care of life concept has been derived from the Constitution of the Republic of Italy, articles 32 and 33. The Republic safeguards health as a fundamental right of the individual and as a collective interest. The Republic guarantees the freedom of the arts and sciences, which may be freely taught.
